1.2 ABSTRACT

In May, 1979, the United States Environmental Protection Agency (EPA) initiated a mandatory quality assurance program. This program was designed to assure all environmental measurements conducted by EPA, state and local agencies and other sources result in data of a known quality. Meeting this goal requires the development of a Quality Assurance Project Plan (QAPP) which contains management policies and monitoring protocols which specify how the Montana Department of Environmental Quality (DEQ) intends to produce data of known and acceptable precision, accuracy, representativeness, and completeness. This document provides the above information for the Montana Department of Environmental Quality.
